Python assignment

Create a Django based web application with the following requirements.

1. Page with a form which will store the following customer data in the database.
   a. First name
   b. Last name
   c. Phone number
   d. Email
   e. Date of birth

2. Page with a form which will store the following shipping data in the database.
   a. First name
   b. Last name
   c. Phone number
   d. Email
   e. Postal code
   f. City
   g. Street
   h. Housenumber

3. We need to be able to deploy the site on two different environments, a test environment and a Production environment, in the test environment we can have the setting DEBUG on True but on Production this should be False (https://docs.djangoproject.com/en/1.11/ref/settings/#debug)
4. Code should be ready for release to production and be prepared for long-term maintainability.

   BONUS: expose all stored form data in an API.

Bonus points for DRY, separation of concerns and form validation.
